# Worldwide Internet of Things Revenue Opportunity

IDC, Internet of Things Spending Guide by Vertical Market, 2014

# Internet of Things Technology Architecture

## IoT Integration Middleware Platform

## Infrastructure Supplier

Cloud Infrastructure, On-Premises Infrastructure

## Advanced Analytics

Machine Learning, AI, Predictive Maintenance,...

## Business Application

Specific market application, vertical business logic  
(Logistics, Retail, Industry 4.0, Health, Smart Buildings)

## IoT Middleware Platform

Data collection, management, analyze, control, process,  
store, select, filter, security

## TELECOM

Data transmission, connectivity

## GATEWAY

EDGE Computing, Data enabler, "modem"

## SENSOR, DEVICE, EQUIPMENT

Data creator, event reporter, actuator

# PaaS as Mainstream proposal

**Primarily Cloud Solutions**

## IoT Integration Middleware Platform

**Infrastructure Supplier**  
Cloud Infrastructure, On-Premises Infrastructure

**Advanced Analytics**  
Machine Learning, AI, Predictive Maintenance,...

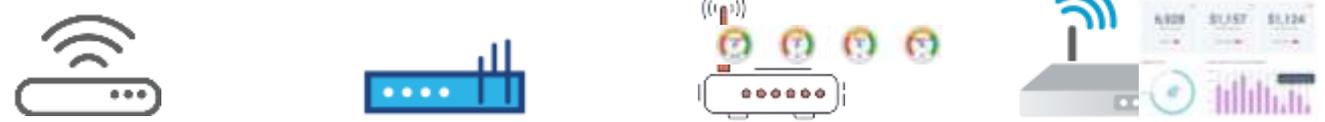

**Business Application**  
Specific market application, vertical business logic  
(Logistics, Retail, Industry 4.0, Health, Smart Buildings)

**IoT Middleware Platform**  
Data collection, management, analyze, control, process,  
store, select, filter, security

**TELECOM**  
Data transmission, connectivity

**GATEWAY**  
EDGE Computing, Data enabler, "modem"

**SENSOR, DEVICE, EQUIPMENT**  
Data creator, event reporter, actuator

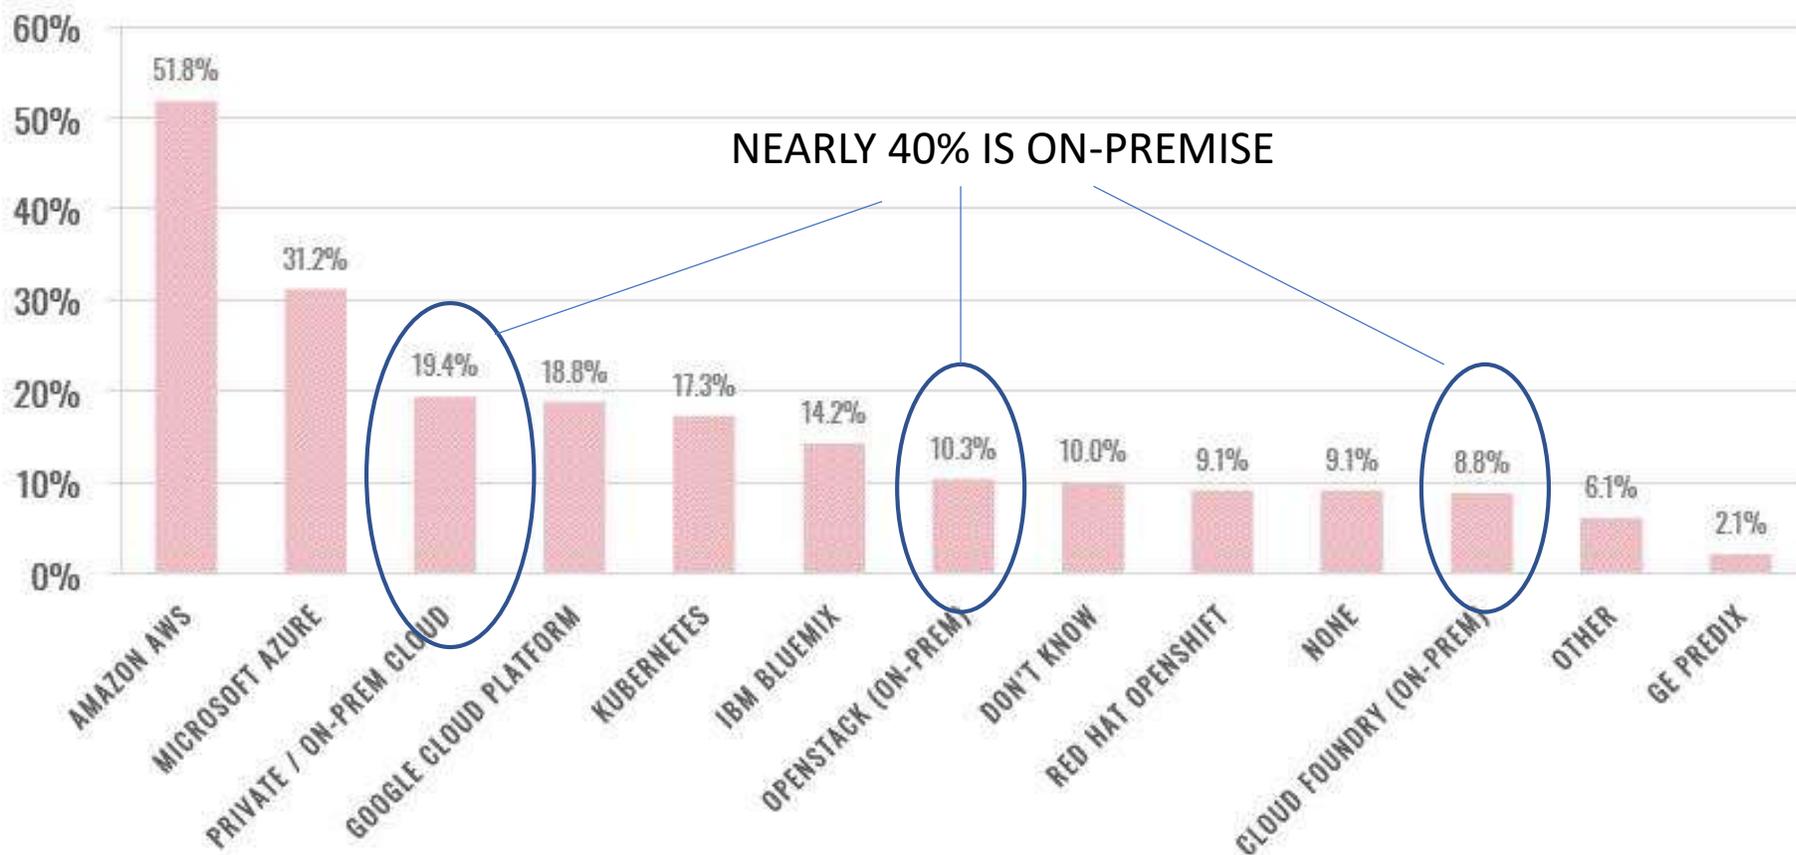

IoT = cloud

~~False~~

# WHO DOES SERVE THOSE CUSTOMERS TODAY? (common request on Industry 4.0)

## CLOUD SERVICES FOR IoT

*Do you use, or plan to use, any of the following cloud service offerings for implementing your IoT solution?*

# MIIMETIQ Adapts to Any Kind of Deployment

100% On-Prem

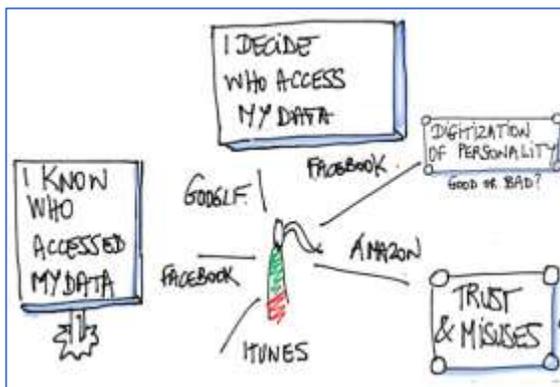

Hybrid

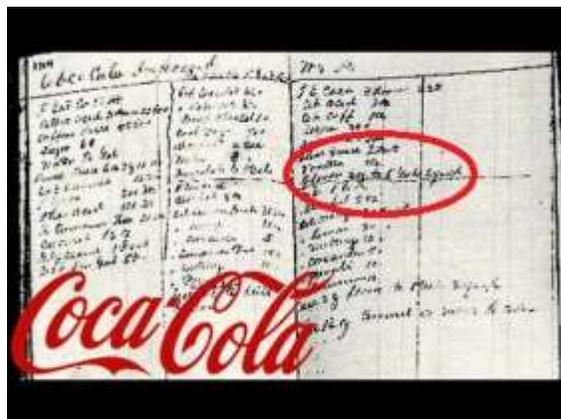

100% Cloud

# The Critical Value of Data Makes Companies re-Think the Management of Their Own Data Coming From Their Equipment/Processes and How to Protect It.

## Platform Ownership

Being aware of the importance of Data in the new economy, more and more customers prefer to have “their own platform” than use someone else’s as they want to be completely independent. Using “Company X platform” is not an option.

## Processes IP Protection

In industrial world, the IP is on the processes. They need to keep those critical IP under full-control and ownership. Cloud is NOT an option.

## Security Concerns

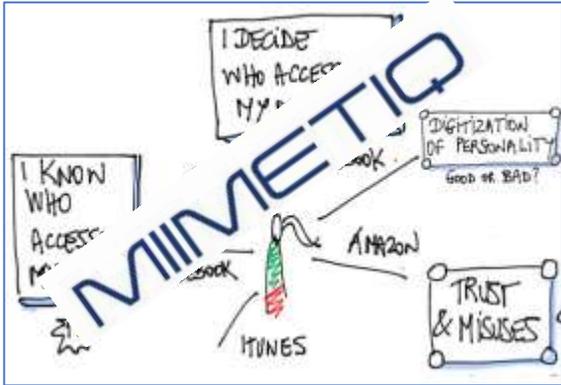

Security is becoming a main concern in IoT. Many customers do not feel yet comfortable relaying in someone else’s infrastructure and data management. On-premise platforms are their preference. Cloud is still far from their priorities.

## Legal Aspects of Data Management

Countries are regulating the management of sensible data and its geographical boundaries. Outsourced Cloud service can create legal compliance issues. Outsourced infrastructure is still far from their priorities.

# MIIMETIQ Solves 100% the Customer's Concerns

## Platform Ownership

MIIMETIQ is a Product not a Service. As such, the customer can develop their own platform, become the owner of the IP of it and re-licence it or offer it as a service to all their customers.

IN summary: **FULL OWNERSHIP OF THE PLATFORM IP**

## Processes IP Protection

As MIIMETIQ can be deployed anywhere (Edge, On-premise, any public Cloud or Private Cloud (Azure, Bluemix, AWS, Google...)) **the customer can start their IoT experience 100% On-premise and evolve to Cloud once they feel comfortable**

## Security Concerns

The security level is under full control of the customer. As they own the Platform and decide the way to deploy it, customer has full control on Security level. **Customer defines the security level instead of just rely on someone else's security**

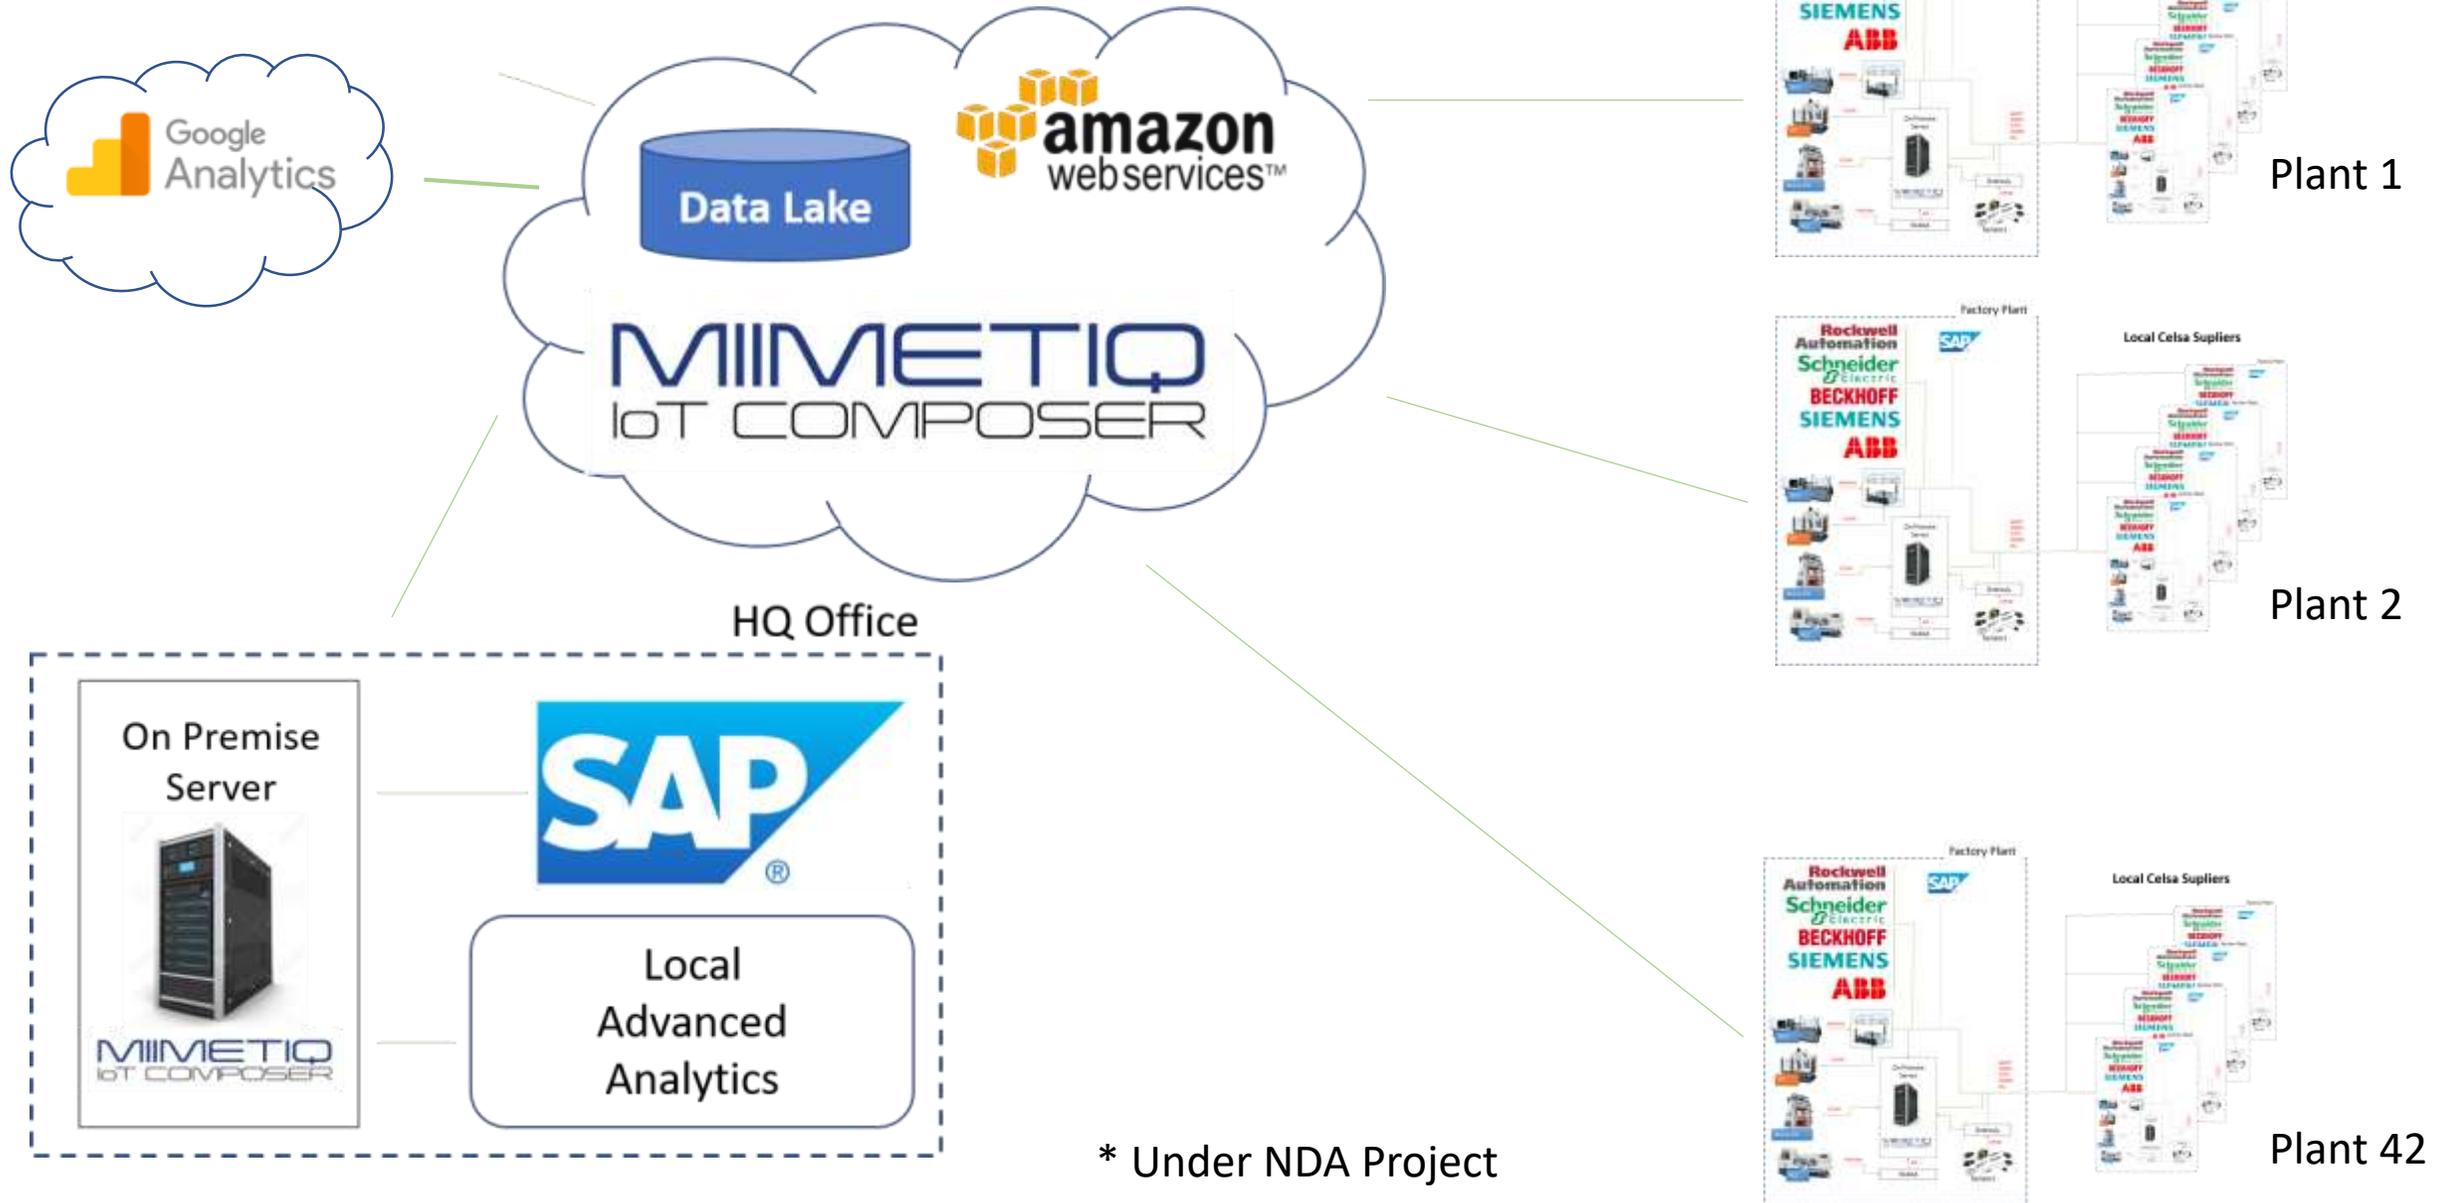

## Legal Aspects of Data Management

Being the owner of the platform and deciding where to install it and how to deploy it, **the infrastructure management is 100% under your decision and control. So you secure the legal compliance**

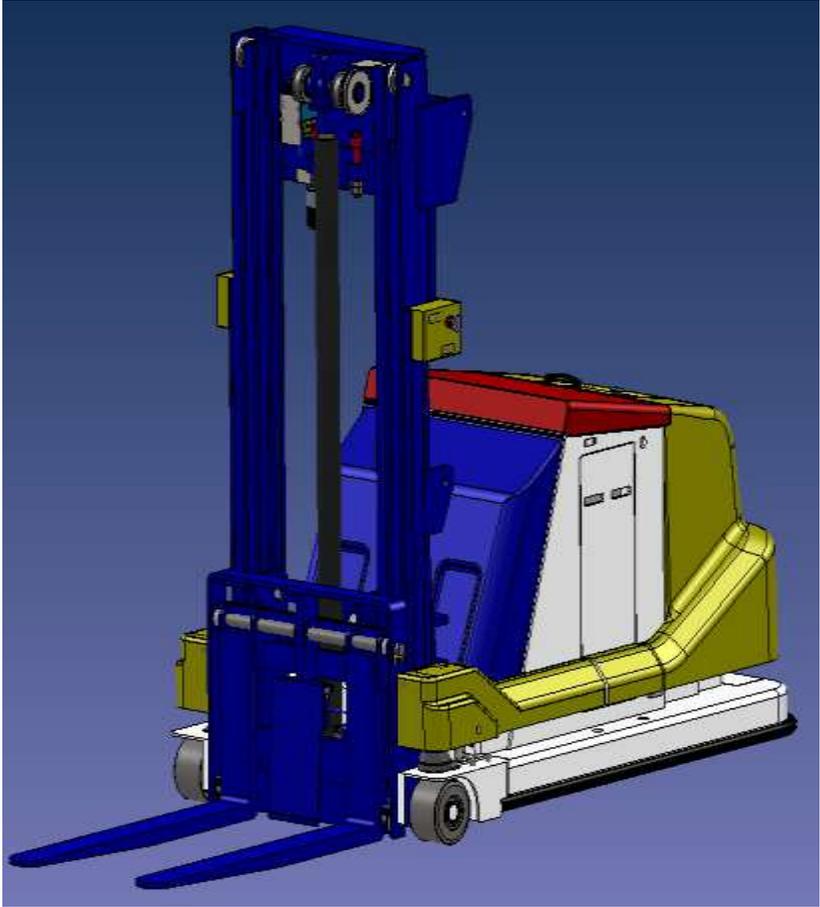

# Real World Projects

# Complete Architecture Factories Digitalization
