

**EURECAT at Alimentaria 2020**

**Thursday 17/09/2020, de 12 a 14h**

**(session in Spanish)**

The agri-food sector faces significant challenges in terms of the availability and use of resources (water, energy) and raw materials. Although applying the criteria of the circular economy in the food production and transformation system is a solution for the improvement in productive efficiency and in the use of resources, the redesign of production processes towards a circular approach and new technologies is required to make it possible.

The session aims to address the strategic challenges for companies in the food sector in the coming years in terms of research and innovation in the field of the circular economy, showing new technologies and success stories of various companies that have begun to apply them.

*(session in Spanish)*
