

David Torrallardona, Ph.D. Research Director in Monogastric Nutrition at IRTA, Spain. He obtained his veterinary degree in 1988 from the Autonomous University of Barcelona. Soon after, he moved to the Rowett Research Institute where he worked under the supervision of Malcolm F. Fuller to obtain his PhD degree in Animal Nutrition by the University of Aberdeen in 1994.

He joined IRTA research institute in 1995, where he has gained many years experience on the study of the effects of enzymes on nutrient digestibility, environmental pollution aspects related to feeding and efficacy studies of different additives in the feeding of swine. He has also worked on the evaluation of the effects of different feed ingredients and additives on the gut health of pigs after weaning. He has been involved in several national and European funded projects. He is currently involved in the EU-FP7 ECO-FCE project 'A whole-systems approach to optimising feed efficiency and reducing the ecological footprint of monogastrics'. He is a member of the editorial boards of the journals "Animal" and "Archives of Animal Nutrition". He has served as secretary (2001-2006) and vice-president (2007-2011) of the Pig Production Commission of the European Association for Animal Production (EAAP), and is currently member of the Spanish Scientific Committee of EAAP and the International Steering Committee for the Digestive Physiology of Pigs Symposium (DPP). He is author/co-author for many scientific publications and contributions to scientific meetings.
