

PATENTED TECHNOLOGY

TUBEASY  
THE PERFECT CENTRING  
OF THE FLOW

# TUBEASY IS

## EASY

EXTREMELY MANAGEABLE FLOW REGULATION

## FAST

VERY QUICK STARTING/SETTING TIME

## PRECISE

GREAT ACCURACY FOR A PERFECT PIPE

## ECONOMICAL

60% SCRAPS REDUCTION IN SETTING

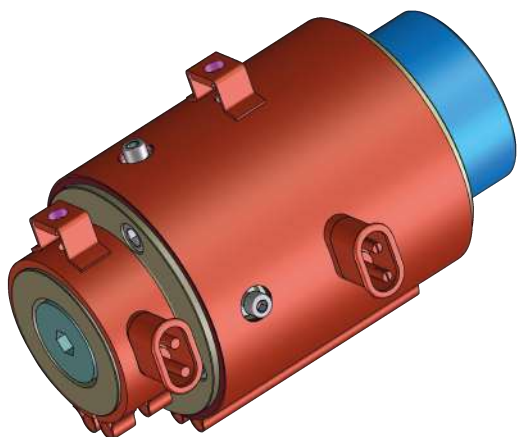

## SIMPLE

ONLY TWO SCREWS FOR A PERFECT CENTRING

Introduced for the first time at the international K2016 fair, the latest **Friul Filiere patent** is dedicated to the pipe world, confirming a growing commitment and a growing expertise in the field. **Tubeasy** is an unprecedented flow centering system managed by two screws, applicable to die heads of any size and any material and currently integrated into each of the heads produced in Friul Filiere. It simplifies the start-up phase by making it fast and saving time and money with a **60% waste reduction**. Compared to the well-known, long and complex traditional system, it's quick and accurate.

**Tubeasy** allows material flow control (even the most extreme, such as PU) and consequently improves not only the general production performance of the plant but also the physical-mechanical characteristics of the finished product.

Friul Filiere designs and manufactures complete die heads, but can also upgrade existing die heads applying the Tubeasy system.

- SPEED
- EASINESS
- ACCURACY
